PROVIDING  
REFRESHMENT SINCE  
1997.

## QUESTIONS TO ASK:

Is the water in your commercial pool too hot ?  
Do you need cooler temperatures for competitive swim teams?  
Do you have poor water quality?

## SOLD WORLD WIDE

The Watercannon Portable Aeration System is used all over the world. Used by USA Swimming during the 2004 Athens Greece Olympics and the 2008 Beijing China Olympics.

## WATERCANNON 3

We use the natural process of aeration found in ocean waves, river rapids, and waterfalls to cool your pool. The Watercannon cools your pool an average of 10 - 12 degrees and replenishes fresh oxygen to your pool water. It reduces water temperatures to cooler, more refreshing levels.

Cooler water temperatures mean reduced chemical usage and better water chemistry. The aeration process speeds up the burning up of pollutants and bacteria in the pool. These all result in reduced operational costs for the pool owner.

The relaxing sound and movement of the waterfalls creates a great atmosphere for social gatherings.

## WATERCANNON 1.5

Cooler water temperatures are needed for high level competitive swimming, aerobic fitness activities, and activities in which participants are generating a lot of heat that needs to be dissipated.

The NCAA requires water temperatures between 79 and 81 degrees Fahrenheit.

FINA (the international governing body of swimming, diving, water polo, and synchronized swimming for the International Olympic Committee) requires water temperatures between 77 and 83 degrees Fahrenheit.

Both units are compact and totally portable. Just prime, plug in and let the Watercannon spray.
